Access & Security Solutions from
NAPCO ACCESS PRO

Access Control & Security Protection
That **Lives** up to **Healthcare** Standards

- Scalable, Access Control & Security Solutions from a Few Doors to Thousands
- Range of Options Including Enterprise with Web Client, Web-Browser-Based Systems, Cloud-Based Hosted Systems (ACaaS)
- Integrated Video, Security & Wireless Locking
- Visitor Management w/ Auto-Expiring IDs for Visitors/Patients/ Med Students
- Multiphase Threat-Level Management
- Synergistic Panels & Software

- Super-Fast Processing - Key In Peak High-Demand Periods
- LDAP Active Directory Single Sign-On & HR Integration
- Open Architecture Integration; Easy Retrofits for Upgrades
- Global Lockdown
- Robust Multi-Database Partitioning – For Different Offices or Departments, etc.
- Numerous Technology & Integration Partners for Easy System Upgrades & Retrofits

NAPCO
SECURITY TECHNOLOGIES

Access Control & Security Solutions for Healthcare

CAPABILITIES FOR TODAY & TOMORROW WITH LOW TOTAL COST OF OWNERSHIP

The health of your facility's security & budgets are a key factor to delivering quality patient service & staff satisfaction. With the rising threat of violence, security demands are up while budgets are often outpaced. Couple that with strict JHACO/CoPs/CMS, HIPAA regulations & it's more important than ever to choose a proven integrated healthcare security solution that provides a low total cost of ownership. That choice is a Continental Access System, a 45 year pioneer in access control & security with long-lived systems in leading US healthcare facilities for decades. Team Continental Enterprise® Enterprise Access Control & Security Management Software with Continental's own field-upgradeable hardware for a high-performance system, incorporating legacy & new structures and systems. Integrate **all identification systems**, from smart cards, proximity, PINs & biometrics; ideal in retrofits, it simultaneously supports multiple credential and reader formats. **Fully scalable** so whether or not you use its full onboard storage for up to 1 million IDs /panel, 32,000 doors or 30,000 access groups per location, you still won't have to change/upgrade software. This translates to lower total cost of ownership and affords facility administrators comprehensive, flexible area-specific access control.

OPEN ARCHITECTURE AND INTEGRATION WITH THIRD-PARTY SYSTEMS

Video & intrusion/fire systems integrate with advanced, partitionable databases spanning **visitor management, parking, patient records, pharmacy, food services, human resources and finance systems.** Continental Enterprise is Microsoft SQL Server database based, well-priced with no annual license fees for lowest TOC. **Import/export** utilities provide smooth data exchange of badge and personnel or patient data, such as import-export of photos for an open exchange between ERP (human resources and IT management) time & attendance data or report generation. Its custom badging utility is easy, and the **visitor management system** has automatic badge-creation via scannable IDs and auto-expiring visitor/patient/medical student IDs, too. With open architecture, use **LDAP Active Directory** to create an authorized cardholder profile on one system and pass that information along to other applicable systems, for a seamless flow of patients or personnel.

SECURING PEOPLE, BUILDINGS & ASSETS 24-7 ONSITE OR REMOTELY

Facilities large & small can be well-secured by Continental Systems' real time monitoring & seamless **integration with most security (intrusion & fire) and video surveillance systems,** complete with dynamic maps, video PTZ & DVR/NVR control. Upon alarm, the **remote central office reporting** option can facilitate faster internal security or police response. Alarm events can trigger email or **SMS emergency alerts & video recording** of the area. Continental Enterprise's **Threat Level Management System,** with an unlimited amount of assignable threat level groups & 5 color-coded states, supports instantly deactivating access privileges, by badge, or badgeholder-groups, with one mouse click. **Global Lockdown** can be activated by badgeholder, system operator or triggered script, including free access doors. In-list or muster reports can account for persons who need to be located, saving time & lives.

HIGH-SPEED MULTITASKING AT PEAK-TIMES

Continental's fast system offers cardholders door-open times of a fraction of a second, evaluating IDs at the panel. Easy **built-in elevator control,** is precision-scheduled by cardholder group(s), floor, building, free access or open-times, like visitor's hours, etc. Also, **Global inputs/outputs** and activity links provide systemwide and individual device control, including use of high/low counters, e.g., **parking facility control, by occupancy.** Continental Enterprise enables access control and security tracking of people or assets on-site or remotely with **Remote Web Client.** Using Internet Explorer, administrators get 24/7 encrypted remote web access, re/configure hardware & software un/lock doors, get reports change privileges, etc.

Robust, Scalable, Continental Enterprise Access Control & Security Platform for Minimal TOC

- Control from 1 to 32,000 doors; up to 1,000,000 cardholders/panel
- Event transactions storage limited only to hard drive size
- 30,000 access groups and over 32,000 readers/ location, with no software to upgrade
- 5 Holiday calendars with 100 Holidays each
- Over 12,000 readers with 112,000 relay outputs per location
- Over 124,000 supervised alarm inputs per location

Seamless Wireless Locking Integration

- Real time integration as single-door controllers with Alarm Lock Trilogy® Networx® Wireless Locks and customizable ArchiTech® designer locks, including auto-scheduling of door open and lock times, audit trail and choice of credentials
- Wireless installation in about an hour to any door type. Grade 1 durability, longest battery life, built in Prox Reader &/or PIN
- Immediately function as standalone access locks, can be integrated on Continental at any time thereafter

Universal Identity Management Solution

- ID credential, smart card, PIV, TWIC, FIPS 201, Mifare & DESfire and biometrics (facial, eye, hand geometry)
- Onboard storage for up to 1 million cards or 500,000 full data PIVs
- LDAP compliant single sign-ons
- Supports Active Directory at cardholder level with popular third-party utilities; Javelin Software – AD Reporter®; Netwrix Auditor®; Management Engine – ADManager Plus®

Multiphase Threat Level Management and/or Lockdown by Group, Area or System Wide

Visitor Management Solution & Custom Photo Badging Utility Open Architecture Integration

- Microsoft SQL Server database based. Competitively priced – no annual software licensing fees for low total cost of ownership
- InterAccess - Open API support allowing third parties to seamlessly integrate Continental software and harness the power and speed of hardware
- Supports a wide range of technologies and databases including partitioning, as well as importing of Microsoft® Active Directory® and Oracle® exports
- Advanced Import / Export Utilities. Open data exchange of badge and personnel, ERP & other databases (e.g. Oracle)

Seamless Universal Video, Security and ID Integration Solution from Single Station

- Integration with most security systems and offers a central reporting option
- Email and SMS notification
- Integrates with third-party manufacturers of video cameras, NVRs/DVRs, biometric devices and readers, intrusion, fire, etc
- Remote System Management via web client

Proven Hardware

- Flexible range of super-fast hardware from single-door POE solution, to wireless PIN/Prox door locks, to expandable conventional or Linux-embedded controllers from 2 to 16 doors
- High quality standards, NAPCO ISO9001; 2000 Certified manufacturing facility produces onboard power supplies, relay- and lightning/ESL-protection, etc
- Built-in labor savings, upgrade migration, low maintenance costs
- Long product line continuity even in legacy systems; many field upgradeable
- Industry's longest warrantees, up to 5 years

Super Fast Speeds Even at Peak Hours

- Fastest processing performance available, (up to 921.6 Kbps communications) i.e., door opens in a fraction of a second, rapid reports and full data downloads in minutes
- Global inputs/outputs and activity links for systemwide and individual device control

Napco Access Pro Solutions Are Integrated with a Growing Number of Systems & Partner Products

- All available through us, including Alarm Lock Trilogy, Networx & ArchiTech Wireless Access Locking, Napco Security & Fire Alarm Systems, Ganz Intelligent Video, Avigilon Video, Video Insight, Exacq, Milestone, Pelco, Salient, Hitron, Integral, BAS-IP Video Intercom, Idemia & Madeye Biometric Facial Recognition, Farpointe Data, OTIS Elevator
